

****Day 4 - Dynamic Frontend Components****

Day 4 of Hackathon 3, focusing on building dynamic frontend components for my marketplace project. Here's a snapshot of my progress:

****Key Achievements:****

- ****Product Listing Component:**** Displayed dynamic product data in a responsive grid layout.
- ****Product Detail Pages:**** Implemented dynamic routing to showcase detailed product information effectively.
- ****Category & Search Bar:**** Enabled seamless product filtering and search functionality.
- ****Cart Features:**** Developed functionalities for efficient cart management, including:
 - Shipment & Billing Forms
 - Order Success Page
 - Order Management: View orders and download invoices.

****Skills & Tools Applied:****

- ****Next.js:**** Utilized dynamic routing and API integration for a smooth user experience.
- ****Sanity CMS:**** Managed content efficiently and dynamically.
- ****Tailwind CSS:**** Designed modern, responsive, and user-friendly interfaces.

These components have significantly enhanced the functionality and user experience of my marketplace project.
